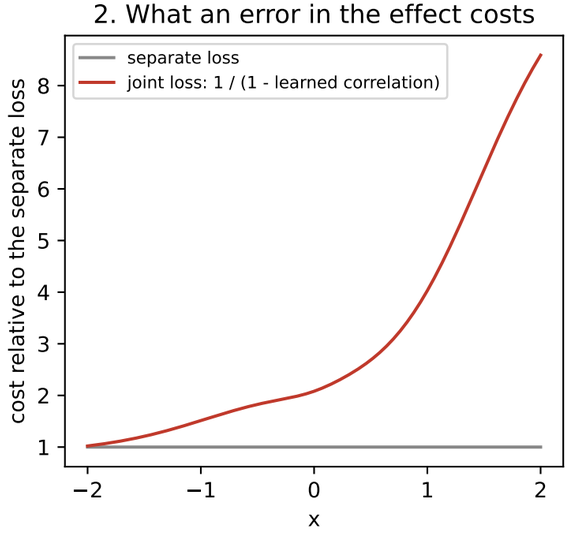
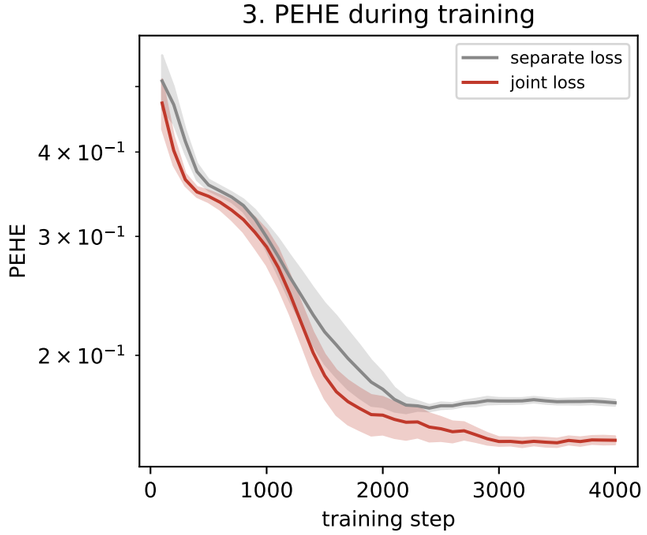
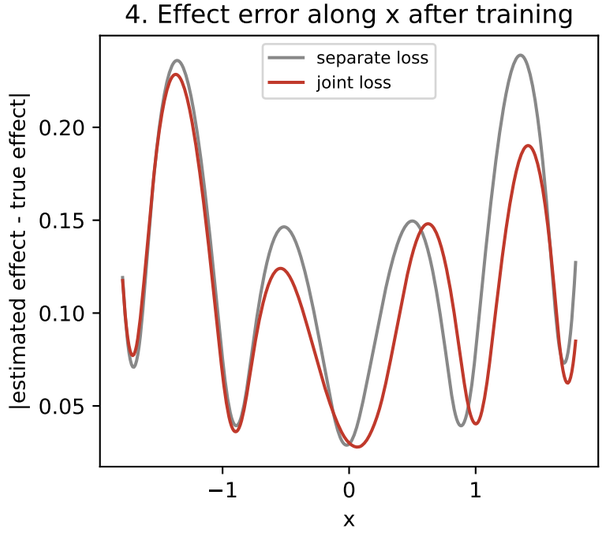
1. The model learns the correlation
true correlation of the noise
correlation learned by the joint loss
correlation
x



2. What an error in the effect costs
separate loss
joint loss: 1 / (1 - learned correlation)
cost relative to the separate loss
x



3. PEHE during training
separate loss
joint loss
PEHE
training step



4. Effect error along x after training
separate loss
joint loss
|estimated effect - true effect|
x
